

## HOW TO TURN ON SOUND SHARING FROM AN APPLICATION (Windows)

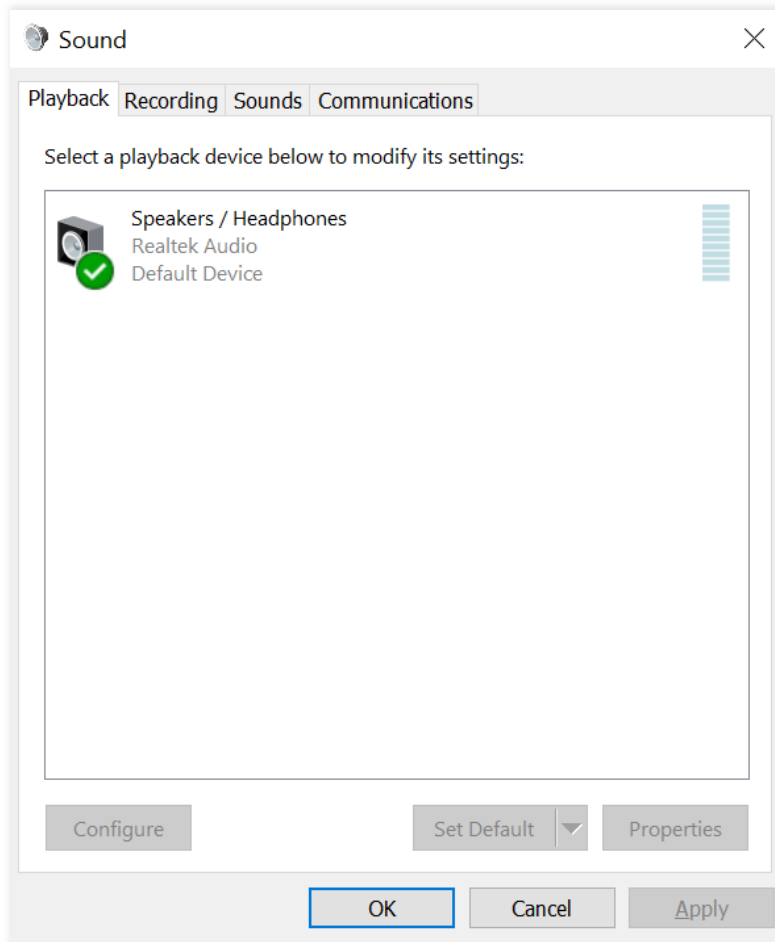

To activate sound sharing from the LiveWebinar application in Windows, follow these steps:

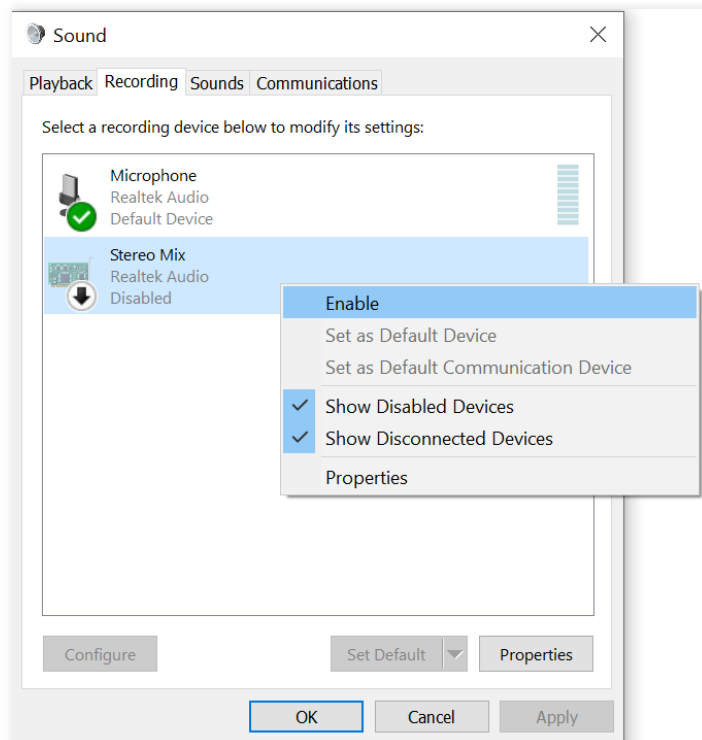

1. Go to your **Settings** in Windows and select **“System”**. From there, open your **“Sound”** settings which will allow you to configure your settings how you need. Click on **“Sound Control Panel”**, and the advanced settings will show up in a new window.

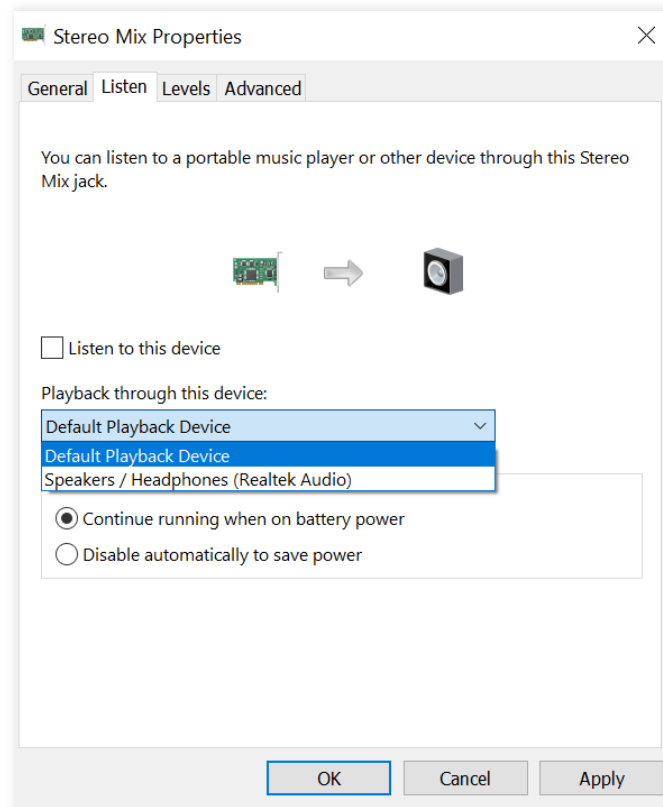

2. In your Sound Control Panel, you are able to set up your default playback or recording devices.

3. Next, switch to the **"Recording"** tab. There you should find the **Stereo Mixer** option. If you can't find it, right click on the blank space, and from the menu select the option **"Show Disabled Devices"** and **"Show Disconnected Devices"**.

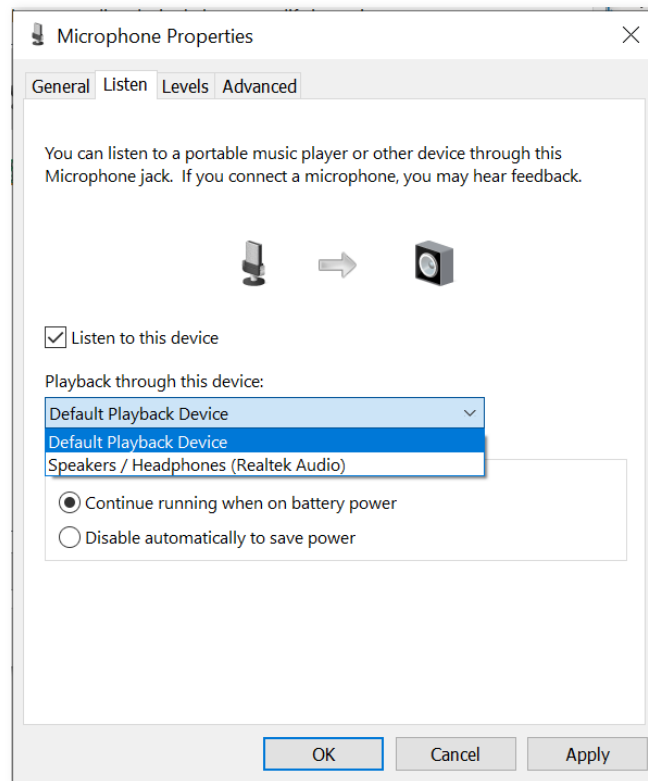

4. Go to Stereo Mix **“Properties”**, and from there click on the **“Listen”** tab. Then, set Stereo Mix as your **Default Playback Device**.

5. Return to the **“Sound”** window, go to **“Recording”**, select **Microphone** and go to **“Properties”**.

- Go to the “Listen” tab and tick the “Listen to this device” box. Finally, set the microphone as the **default playback device** and click the “Apply” button.

- The last step involves finalizing the change in LiveWebinar. After entering your webinar room, select **Stereo Mix** as your microphone. You can now play music or video via YouTube and speak through your microphone (in this configuration you won't hear the sound through headphones if you're using them).
